SUMMARY

Systems Development Engineer at AWS with over a decade of experience turning slow, risky infrastructure work into safe, repeatable automation. For S3 Glacier, that meant cutting region launches from about 60 days to under 30 as the hardware footprint grew to 11 AWS Regions. I also designed and built the system that rolled out firmware updates to about 10,000 drives with zero high-severity incidents. Before AWS, I ran Linux and cloud infrastructure for SaaS and enterprise teams, including a platform serving 15 million requests a day. I do my best work where internal systems meet, turning real-world business processes into software workflows so teams can move faster together.

PROFESSIONAL EXPERIENCE

AWS - S3 | Systems Development Engineer
September 2022 - Present | Crystal City, VA

- Implemented a firmware-update orchestration service across 11 AWS Regions with staged, safety-gated updates for about 10,000 drives on about 2,500 custom hardware units; resulted in zero Sev2 incidents.
- Led expansion of 8 services into 6 new AWS Regions; fixed opt-in-region gaps in cross-account S3 policies and IAM/STS endpoints.
- Built 6 Go clients for internally vended workflow orchestration, host lifecycle management, and cross-account request-and-response workflows.
- Delivered CDK constructs: standardized CloudWatch logging, an AppConfig emergency stop, least-privilege IAM roles, S3 audited access logging, and Step Functions workflows handling custom retry and error logic.
- Built shared libraries consumed by up to 9 services supporting S3 Glacier's object storage platform at exabyte scale.
- Managed a junior engineer through structured work plans, architectural guidance, and quality checks.
- Led end-to-end implementations: design and durability reviews, go/no-go rollout, deployment planning, readiness reviews, and post-launch verification.

Transcat | Cloud Systems Engineer
August 2020 - August 2022 | Rochester, NY, USA

- Built a Jenkins CI/CD pipeline for a microservices application on AWS ECS.
- Migrated infrastructure to CloudFormation, and implemented a SOX-compliant Linux backup and patching solution using AWS Backup and Systems Manager.
- Integrated Datadog monitoring and performance dashboards for enterprise applications.

DealerOn | Linux Systems Engineer
September 2016 - July 2018 | Derwood, MD, USA

- Maintained 99.99% uptime for a SaaS environment of more than 150 VMware virtual machines while meeting SLA response-time requirements for more than 15 million daily requests through Fastly, NGINX, and Windows IIS.
- Deployed and administered multi-node Redis, Elasticsearch, and Riak systems.
- Designed real-time performance dashboards using Zabbix, Graylog, PRTG, Grafana, and Opserver.

DigBang | Systems Administrator
February 2013 - January 2016 | Buenos Aires, Argentina

- Deployed Atlassian JIRA and related products for the Agile development lifecycle. Integrated Laravel and the Deployer deployment tool.
- Administered Linux development and QA servers.

RESEARCH EXPERIENCE

Gallaudet University, Disability and Rehabilitation Research Project | Research Assistant
September 2018 - October 2019 | Washington, DC, USA

- Surveyed and classified published research papers for Captions DRRP 2019.
- Usability research on the impact of different caption punctuation frameworks on user experience.

TECHNICAL SKILLS

Programming Languages: Go, TypeScript, Python
Cloud & Infrastructure as Code: AWS, AWS CDK, CloudFormation, AWS ECS, AWS Fargate, S3, IAM, CloudWatch, AppConfig, Step Functions, AWS Backup, Systems Manager
CI/CD & Automation: Jenkins, Docker
Systems Engineering: Linux, VMware, NGINX, Windows IIS, Fastly
Observability & Data Platforms: Datadog, Grafana, Graylog, Zabbix, PRTG, Opserver, Redis, Elasticsearch, Riak

EDUCATION

Rochester Institute of Technology | M.S. in Computer Science (~50% completed) — Fall 2021 - Ongoing
Gallaudet University | B.S. in Information Technology — Fall 2018 - May 2020
